

**AMENDMENTS TO THE CLAIMS**

1. (Original) A cross-linkable rubber composition comprised of  
a mixture of a carboxyl group-containing nitrile copolymer rubber (A) with a carboxyl group content per 100 g of  $2 \times 10^{-3}$  to  $1 \times 10^{-1}$  equivalents and a carboxyl group-containing acryl-based polymer (B) with a carboxyl group content per 100 g of  $4 \times 10^{-4}$  to  $1 \times 10^{-1}$  equivalents in a weight ratio A:B=40:60 to 90:10 into which  
a cross-linking agent (C) able to cross-link the carboxyl groups of both said nitrile copolymer rubber (A) and said acryl-based polymer (B) is blended,  
the amount blended of said cross-linking agent (C), converted to equivalents of functional groups able to react with carboxyl groups in said cross-linking agent, being 0.3 to 3 times equivalents of the total content of the carboxyl groups of both said nitrile copolymer rubber (A) and said acryl-based polymer (B).
2. (Original) The cross-linkable rubber composition as set forth in claim 1, wherein a ratio of the carboxyl group content of said acryl-based polymer (B) with respect to the carboxyl group content of said nitrile copolymer rubber (A) is 0.2 to 1 times equivalents.
3. (Original) The cross-linkable rubber composition as set forth in claim 1 or 2, wherein a total content of the carboxyl groups of both said nitrile copolymer rubber (A) and said acryl-based polymer (B) is  $7 \times 10^{-4}$  to  $1 \times 10^{-1}$  equivalents per 100 g.

4. (Currently amended) The cross-linkable rubber composition as set forth in ~~any of claims 1 to 3~~ claim 1, wherein said nitrile copolymer rubber (A) includes an  $\alpha,\beta$ -ethylenic unsaturated dicarboxylic acid monoester unit.

5. (Currently amended) The cross-linkable rubber composition as set forth in ~~any of claims 1 to 4~~ claim 1, wherein said acryl-based polymer (B) includes an  $\alpha,\beta$ -ethylenic unsaturated dicarboxylic acid monoester unit.

6. (Currently amended) The cross-linkable rubber composition as set forth in ~~any of claims 1 to 5~~ claim 1, wherein said cross-linking agent (C) is a polyvalent amine compound.

7. (Currently amended) A cross-linked product made by cross-linking the cross-linkable rubber composition as set forth in ~~any of claims 1 to 6~~ claim 1.
